# Drug List

## What is a Preventive Drug List?

It's a list of drugs that may help prevent serious illnesses and complications. IRS guidelines for high-deductible health plans provide that preventive care, including prescription medications used for preventive purposes, can be excluded from the deductible. Taking preventive drugs, as directed by your doctor, may help you live a healthier life today. It may also help you avoid serious illness in the future. You will pay a copayment for medications on the preventive drugs list until you meet your out-of-pocket maximum.

## What Happens at the Pharmacy?

The pharmacist enters your prescription into the computer system. If your medication is on the Preventive Drug List, the system will tell the pharmacist which copayment applies to your prescription or if you have reached your out-of-pocket maximum.

## What Medications are Included?

Generic, preferred brand and non-preferred brand medications are listed below. For the lowest out-of-pocket expense, you should always consider generics if you and your doctor decide they are right for you. We list generic drugs in this document in lower-case letters followed by **(g)**. Consider brand-name drugs if no generic drugs are available to treat your condition. We list brand-name medications in this document in all capital letters. We denote non-preferred brand-name medications with an **(NP)**.
