

# Specialty Drug List

January 2017

## What Are Specialty Drugs?

They're prescription medications that are used to treat complex or chronic medical conditions like cancer, rheumatoid arthritis, multiple sclerosis and hepatitis, just to name a few. They are often self-injected and usually require patient-specific dosing and careful clinical monitoring. They may also require special handling and refrigeration.

Not all plans provide the same level of coverage for specialty drugs. And with some plans, you must use our preferred specialty pharmacy, CVS/specialty™, for your specialty drug prescriptions. CVS/specialty is a division of CVS Caremark, an independent company that dispenses specialty drugs on behalf of your health plan.

Check your benefit information to learn how your plan covers specialty drugs. You can also view your personal benefit information on our website. If required, contact CVS/specialty at 800-237-2767 to get started with the process to have your specialty drug prescription(s) filled. Your doctor can also call CVS/specialty at this number or fax prescriptions to 800-323-2445.

Depending on your plan, you may need prior authorization for some specialty drugs. Prior authorization promotes the proper use of medications. If your doctor prescribes a specialty drug that needs a prior authorization, your doctor must get prior approval before your plan will pay for it. We base prior authorization guidelines on U.S. Food and Drug Administration and manufacturer guidelines, medical literature, safety, accepted medical practice, appropriate use and benefit design.

## Which Specialty Drugs Are Preferred or Require Prior Authorization?

Preferred specialty drugs are in bold print. Talk to your doctor about using a preferred specialty drug. An asterisk (\*) identifies drugs that may require prior authorization, depending on your plan. If your drug requires prior authorization, your doctor should request this by calling 800-237-2767 or faxing 866-249-6155.

## What Happens at the Pharmacy?

**When you use a local network pharmacy**, the pharmacist enters your prescription into the computer system. If you are required to use CVS/specialty pharmacy, or if your prescription requires prior authorization, the system will alert your pharmacist with the phone number your doctor should call. If you are not required to use CVS/specialty and a prior authorization is not required (or you already have one), the system will tell your pharmacist the amount you must pay. The pharmacist can then fill your prescription.

**Please note:** Not all specialty drugs are available through local pharmacies. If your drug is only available at a specialty pharmacy, you must use CVS/specialty.

When you use CVS/specialty pharmacy and your prescription requires prior authorization, CVS/specialty will work with your doctor to get the information needed to make a decision. If a prior authorization is not required (or if you already have one), the system will tell your pharmacist the amount you must pay. CVS/specialty can then fill your prescription.

## Specialty Drug List – 1/1/17

|                                 |                             |                            |                        |                              |
